

# CONSTRUCTION CORPS

CONSTRUCTION YOU CAN COUNT ON

Date - 6.12.2021

To,  
Prof. Shital Golhar  
Senior Architect  
Ajeenkya Dy Patil School of Architecture.  
Pune

Dear Prof. Shital Golhar,

I am writing to formally convey the approval of funding amounting to Rs. 20 lakh for your innovative research project on "Environmental and Architectural Services," with a specific focus on hospital design, including Mechanical, Electrical, and Plumbing (MEP) systems. Your project aligns seamlessly with our vision to promote sustainable architecture and effective healthcare solutions, and we are excited to support your endeavors in this vital area.

The importance of environmentally responsible design in healthcare cannot be overstated. As you are aware, hospitals are often resource-intensive facilities that significantly impact the environment. By focusing on universal design principles and integrating MEP systems that prioritize sustainability, your project has the potential to set a benchmark in the architectural community. We believe that your research can lead to improvements in not only energy efficiency but also patient well-being, making healthcare environments more conducive to healing.

To ensure a structured and efficient use of the funds, we have outlined the disbursement plan in accordance with the various stages of your project. This plan aims to facilitate the smooth execution of your research and ensure accountability at each step. Below is a detailed breakdown of the funding at different stages:

Stage of Project	Amount (Rs.)	Description
<b>1. Initial Setup and Planning</b>	5,00,000	This phase includes project initiation, site assessments, preliminary studies, and stakeholder consultations to gather insights and refine project objectives.
<b>2. Design Development</b>	7,00,000	This stage will encompass detailed architectural and MEP design work, including drafting, modeling, and simulations to ensure compliance with environmental standards and hospital regulations.

<b>3. Implementation Phase</b>	5,00,000	During this phase, funds will be allocated for the procurement of materials, construction activities, and the hiring of skilled labor to implement the designs effectively.
<b>4. Evaluation and Reporting</b>	3,00,000	This final stage will focus on conducting assessments, compiling findings, and preparing a comprehensive report to disseminate the results of your research to relevant stakeholders.
<b>Total</b>	<b>20,00,000</b>	

We expect that this structured disbursement plan will aid you in monitoring the progress of your research while maintaining the highest standards of accountability and efficiency. We encourage you to maintain regular communication with our office to provide updates on project milestones, as well as any unforeseen challenges that may arise during the course of your research.

Your commitment to advancing the field of environmental architecture is commendable, and we are eager to see how your findings will contribute to more sustainable healthcare practices. The integration of advanced MEP systems into hospital designs is particularly crucial, as these systems often play a vital role in energy consumption and operational efficiency.

As you embark on this important project, we want to assure you that our institution is here to support you in any way possible. Please do not hesitate to reach out if you require additional resources, mentorship, or collaboration opportunities. We believe that your project not only has the potential to yield significant academic contributions but can also positively impact real-world applications in the healthcare sector.

Congratulations on this well-deserved funding, and we look forward to your innovative work shaping the future of hospital design.
